

BRIEFLETS.
—Prayer meeting night.
—Last night gave everybody a breeze.
—Wagon wheels have a soft thing of it now.

—That citizen's meeting last night was poorly advertised.
—Courtney remains about the same and, has a man to care for him nights.

—Snell's case is set at Elkhorn for the 19th and Mrs. Fogarty's for the 24th.
—One tramp was run in last night, and was to-day sentenced for fifteen days.

—The Remenly concert is to be given in the Congregational church, on the 25th.
—Miss Mary E. Smith is desired to call at the money order department of the postoffice.

—McKee Rankin is to be at the Opera house on the 23d of March. That will be a treat sure.

—Nash Newell is reported as quite low to-day, and great anxiety is felt as to the results of his illness.

—The tramp law has not been repealed despite the fact that "our own reporter" of a morning paper says so.

—The question now is, how do you like that Municipal Court bill? There seems to be a division of the house.

—There has been no marked change in Mr. Robbins' condition, and each day increases the chances of his ultimate recovery.

—It will cost you only ten cents to hear Rev. T. P. Sawin's interesting lecture on "The Zulu War," at Cannon's hall, next Monday night.

—Mr. Hennessey will now have another claim to present to the Council. The rain yesterday flooded his hen coop, and drowned some more poultry.

—Tickets for Miss Minerva Guernsey's impersonations are now on sale at Mosley's at 25 and 50 cents. No charge for reserved seats. Secure them early for a full house is anticipated.

—There begins to be figuring and who pulling as to who will be judge and who will be clerk, if the Municipal Court is established. That "if" don't seem to keep the vigilantes on going to work.

—The county members of the Board of Supervisors seem strangely unanimous in favor of the Municipal Court, while the city members are equally opposed to it. From this many naturally infer that while it will lessen the counties expense it will increase the city's share.

—If there are any of our taxpayers who feel that the Municipal Court bill is not the thing, now is the time for them to express themselves in a formal manner, by getting up a petition to present to the Assemblymen representing this county. It would be a much more effectual protest than any amount of street talk.

—The rain yesterday caused considerable flooding of some lots in the Fourth ward, and a street near Black Hawk was badly washed out, and a culvert swept away. Yesterday was a good day for the Aldermen to stand around the street corners and see where repairs were needed, but they didn't do it though. Too dampish.

—Mr. Hendrix, a young attorney from Madison, has concluded to open an office in this city, and enter into the practice of the law. He is a graduate of the State University and the Law School at Madison, and has since been engaged in the practice in that city. He has rented the office in the Postoffice block, now occupied by Marshal Russell.

—We are in receipt of a letter from J. J. White, who is now in Brussels, in which he says—"Although not a new subscriber to the Gazette, I trust I may be entitled to one of those wonderful almanacs which are creating so much notice on both sides of the Atlantic." That's it, they all want it. Another letter from a lady subscriber in New York says—"On each Saturday we receive your weekly Gazette, and we hail its coming, as a pleasant friend to our fireside." These are only samples gathered from the mails, showing that the Gazette is appreciated away from home, as well as at home.

—A pair of diminutive sized boys clamored up the stairs into a doctor's office yesterday, and for the ninth and a half time wanted to know if there were any spittoons to clean, waste baskets to empty, stairs to sweep down, or any other work for their little hands to do. A young man in the office told one of the lads that he would give him some work, and bidding him be seated on a stool, brought to him a pair of old forceps. Before the lad had got through looking them over, and wondering what was to be done, the doctor's apprentice brought an old skull and handing it to the lad told him to pull the teeth out. That boy tumbled off the stool in horror and with a doublesomersault and a pair of handkerchiefs, somehow or other landed in the hall, where he was joined by his partner, and no runaway team ever made better time on a short distance. We met them just as they emerged from the building, and even then the horrified look was still on their faces. "Why mister, he wanted me to pull the teeth out of a skull! Why, I wouldn't have a done for a million dollars, no sirree!"—and the lads hurriedly put a still further distance between themselves and the abode of bones.

—Those lads had only carried a little longer we would have assuaged their grief, and given them sweet revenge on the young man, by telling them a little joke on him, but perhaps they had rather hear it from his own lips. If they will get up courage to go back to that young man and ask him how he likes to sit down on a porous plaster, he may tell the whole story. We advise them, though, to have their jackets well padded, and not to get within kicking distance, when they ask the question.

—The Daily Press and Dakotian of recent date contains the following, evidently penned by Wheeler Bowen in regard to his old friend "Dug":

By a telegraphic item in the eastern papers, we notice that J. D. King, of Janesville, Wisconsin, has been appointed special agent for the postoffice department for Dakota and several of the states. Mr. King's experience with postal matters dates back as far as 1859 and we know

from actual knowledge that he is thoroughly conversant with all the details of the service. Postmasters and route agents in Dakota will find in him an genial official as ever held a commission.

GOING AT IT.

The Survey for a Road Between Janesville and Beloit—The Probable Extension to Rockford.

There has been in the past much thought and talk about having a railroad built between this city and Beloit, but of late it has rather dropped out of public notice, although with some individual members of the community it has not been left to slumber. Mr. A. A. Jackson has for two years past been keeping the matter in mind, and from time to time has quietly made moves in that direction, and his exertions seem to be now ripening into definite action, and give ground for hope that it will ere long result in the completion and success of the enterprise. Mr. Jackson was in Milwaukee yesterday, conferring with the officers of the Milwaukee & St. Paul Railroad Company, and they have decided to put on a corps of engineers next week, if the weather permits, to make a survey of the contemplated road. It is understood that if this city gives encouragement to the enterprise, and will aid it somewhat financially, not to exceed \$10,000, there is little doubt but that it will be pushed to a completion. The advantages of such a road need not be dwelt upon, and they will be still further increased, if the long contemplated line from Rockford to Beloit is built, and there is a strong probability that if the Rockford people will help the enterprise, the line will be made complete between Janesville and Rockford within a short time, thus giving a direct railroad route from Lake Superior to Cairo, with the exception of a few miles in Illinois, which would doubtless be built, if this road is put into active operation. The Rockford people have for some time been anxious to get a road from there northward into the prairies, and several times have made moves in that direction, but none have thus far resulted in definite action. If under the present arrangement they saw an active interest by giving it some pecuniary encouragement, there seems no reason to doubt but that the road will be built.

After the survey is completed between here and Beloit, it can be definitely understood just what will be needed to carry the enterprise to completion, and what share of the burden this city will be asked to bear, but on the outstart it is estimated not to exceed \$10,000, and there seems little reason to doubt that amount will be secured here.

TOUCHING TRIBUTES.

The remains of Charles Haselton arrived from Chicago on last evening's train, being accompanied by Mrs. Haselton and her two sons. The sorrow stricken father was at the depot, and in waiting with him were his brother Knights of Pythias S. B. Smith, T. T. Croft, A. H. Sheldon and Charles Atwood. The remains were taken to the family residence, and arrangements have been made for holding the funeral services there at half-past 2 o'clock tomorrow afternoon. Rev. J. W. Sanderson officiating. A number of the telegraph operators in Chicago, with whom the deceased was associated, and by whom he was greatly esteemed, expect to be present, to thus express not only their sorrow and sympathy, but also as representatives of the many more who would join in thus giving personal expressions to their feelings, were it not for duties preventing their attendance. The sympathy of the entire community here is with the family thus saddened, and few deaths have so touched the common heart as this.

The Chicago Times this morning says: "A large number of his friends will attend the funeral from here. Operators in Chicago and Milwaukee have contributed floral tributes. One of these designs represents two telegraph poles with wires stretching between them, with an arch over this bearing the words 'No Circuit.' Another design bears the symbol 'Q. Q.' which, in the telegraphers' vocabulary, means 'The End.'"

Home Comforts, Moderate rates, Astor House, New York.

A WASTE OF TIME.

A few of the business men dropped into the Council Chamber last night to see what a business meeting of the citizens had been called for. No one seemed to know and nothing could be done but to sit around and exchange guesses. There were about a score of men present, most of whom came by the invitation of three or four of their fellows who happened to see the notice in yesterday morning's paper. As the notice was given apparent editorial action, a delegation went to the office of that paper to gain information, but were informed that nothing was known of it there, except that some unknown personage had left a slip on the table, and it had been crowded into their columns, to fill up space, for lack of news. The explanation was not entirely satisfactory, and some muttered about it being an odd way to run a newspaper. A few new arrivals, to take the place of those who departed, served to break the monotony of the waiting, and most of those present were at one time or another during the meeting elected chairmen. Those who smoked made sad havoc with the City Clerk's pipes and tobacco, and those who couldn't smoke patronized the water cooler, and busied themselves in punching holes through the blotting pads, cleaning their finger nails, and swapping jokes. A resolution was introduced to have the names and costumes published, but was voted down by a howl. Others wanted to chip in dime apiece to investigate the newspaper business, but none of the talk ripened into any action, and when the City Clerk began to gape it was taken for a motion to adjourn, which he seconded by turning out the gas, and the building was left in darkness and solitude, each solemnly swearing off from paying further attention to notices unless coming from reliable sources.

G. A. HELLMAN, Editor Republican, Pittsburgh, Pa., was cured of Rheumatism by ST. JACOB'S OIL.

THE WEATHER.

REPORTED BY FRANKLIN & EYERSON, DULUTH.

The thermometer at 6 o'clock last night stood at 49 degrees above; at 1 o'clock a. m., to-day at 38 degrees above; at 7 o'clock p. m., at 31 degrees above, and at 1 o'clock a. m., at 35 degrees above. Clear.

The indications to-day are: For the upper lake region, light rain or snow, followed by clearing, colder weather, northwest to southwest winds, and rising barometer.

GOOD EVIDENCE.

When such men as the Rev. Dr. Rankin, Rev. Dr. Harey, Father Fitz Gerald, Prof. Green, Dr. Bartine, Col. John K. McClesney, E. W. Neff, and a host of others equally trustworthy, certify over their own signatures to the marvelous efficacy of Warner's Safe Kidney and Liver Cure, in the diseases for which it is recommended, it is time to dismiss doubts on the subject.

CONSUMPTION.

Our experience has proved that Pulmonary Consumption is produced in a great many instances by a primary affection of the liver, and generally speaking, one of the principal causes of its frequent prevalence, in this climate. Many persons suffer more or less from a derangement of the liver, which in its early stages does not interrupt them in their daily pursuits, therefore allowed to go on from year to year, and convey the disease direct to the lungs.

The necessity under these circumstances of those who suffer from this disease, in resorting to proper treatment for relief as early as possible cannot but be apparent to all. We do not wish to be understood that a primary affection of the liver, is invariably the cause of pulmonary consumption. Many other causes may exist, forcing such results, as hereditary disposition, asthma, chronic throat affections, and the results of colds, croup, pleurisy, inflammation, injury to the liver, or direct action of diseases, upon the lungs, in ordinary cases, in the first instance is debility of the patient, soon leading to a derangement of the liver, which in its early stages does not interrupt them in their daily pursuits, therefore allowed to go on from year to year, and convey the disease direct to the lungs.

The necessity under these circumstances of those who suffer from this disease, in resorting to proper treatment for relief as early as possible cannot but be apparent to all. We do not wish to be understood that a primary affection of the liver, is invariably the cause of pulmonary consumption. Many other causes may exist, forcing such results, as hereditary disposition, asthma, chronic throat affections, and the results of colds, croup, pleurisy, inflammation, injury to the liver, or direct action of diseases, upon the lungs, in ordinary cases, in the first instance is debility of the patient, soon leading to a derangement of the liver, which in its early stages does not interrupt them in their daily pursuits, therefore allowed to go on from year to year, and convey the disease direct to the lungs.
